

## Tetra Tech EMC Business Solutions Division (BSD) Expands Operations in Huntsville, Alabama

Over the past year, BSD has significantly increased the Tetra Tech EMC footprint in The Rocket City (Huntsville, AL). This increase has allowed BSD to continue to provide the Missile Defense Agency (MDA) continuity of operations during the first phase of the BRAC transition with no degradation of services. Under the direction of Glenn Stidham, BSD's Director of Operations and of Denise Johns and Ron Moser, BSD's Program Managers for Facilities Management and Operations Services and Management Support Services, respectively, our capabilities have expanded customer support in the areas of procurement, facility management, custodial support, transportation and property management.

With 28 employees now on the ground in Huntsville providing Facilities Management and Operations and Management Support Services to MDA and authorization for 9 more, BSD hired Mr. Mark Gerecht as the new Project Manager for Huntsville Facilities Management and Operations Services. Mr. Gerecht provides the necessary management oversight of the entire team, provides direct customer interface, and seeks and pursues new business opportunities. Tim Gossett, Project Lead for Huntsville Secured Facilities Custodial Services, has taken the lead in providing top quality custodial support receiving numerous accolades with regard to his team's performance and high standards. Stephen Jones, Project Lead for Huntsville Warehouse/Move Support, has taken on the immense task of standing up a warehouse from scratch and has done an excellent job in establishing warehouse operations. Willie Harrison, Project Lead for Huntsville Purchasing Support Services and MDA's Huntsville Facilities Management Coordination, has aggressively undertaken the task of moving the MDA South procurement section to a new location, developing new processes, and running the newly established customer call center. Mr. Gerald Prosser, Project Lead for Huntsville Property Accountability Support, has been instrumental in transitioning property operations from 106 Wynn Drive to the new MDA warehouse and in leading the effort to undertake accountability of all MDA property, enterprise-wide. Steve Lebron-Arroyo has kicked off the MDA Executive Motor Pool in Huntsville and to date has provided exceptional driving services to three and four star Generals, Senior Executives, and Members of Congress.

While the Mark Gerecht and the Huntsville project leads have been instrumental in planning and executing their duties and responsibilities, it is the actions of our great Huntsville team members that have ensured our success in these areas. Each one of our team members has been instrumental in providing friendly and professional support to our customers on a daily basis. As a result of their actions, our team members are viewed within MDA as friendly professionals, and their actions have reinforced a positive image of the Tetra Tech EMC team with our customer.

Last but not least the Huntsville team has received tremendous support from members of BSD's Arlington Operations team. Without their knowledge and expertise the transition would have been much more time consuming and the learning curve would have been much steeper. HATS OFF to the entire team both North and South and their exceptional support in helping MDA during this initial transition phase. Team work among the members of BSD both in Huntsville and Arlington has been the driving force in providing exceptional support to our customer.
